

Quick Guide: What Actually Helps Your WiFi – And What Doesn't From A.M Electrics Devon Ltd

Helping homes across Newton Abbot, Exeter, Torquay & Paignton stay connected

What Helps WiFi Speed

- Hardwired internet points – Fast, stable, no dropouts (perfect for offices, gaming & streaming)
- Central router placement – Keep it off the floor and away from thick walls
- Modern equipment – Old routers and devices can slow everything down
- Fewer devices on WiFi – Hardwiring frees up bandwidth
- Mesh systems – Can help in large or awkward-shaped homes

What Doesn't Help

- WiFi boosters – Often just repeat a weak signal
- Constantly moving the router – Won't fix a poor layout
- Too many users – Causes slowdowns unless devices are hardwired
- Ignoring wiring issues – Sometimes it's not WiFi, it's the cabling

A.M Electrics Can Help

We install clean, discreet internet points to boost your speed where you need it most – no more buffering, lag, or signal blackspots.
