

Electrical Installation Condition Report (EICR)

When I attend to carry out an EICR, I will need the following access:

Access Required

- Full access to the consumer unit / fuse board
- Access to as many sockets as possible
- (Sockets behind furniture are not the end of the world)
- Access to the internal water stop cock
- (To check earthing and bonding)
- Access to the gas meter
- (To check earthing and bonding where applicable)

Power

- The power will be switched off at times during the inspection
- Please unplug sensitive equipment before I arrive
- (Computers, TVs, internet equipment, etc.)

Time on Site

- Typical inspection time is 2-4 hours
- This may be longer depending on property size and number of circuits

This inspection is required to confirm the safety of the electrical installation.
